Set Up

automatic **wireless** network configuration

LIS Instruction Series 07

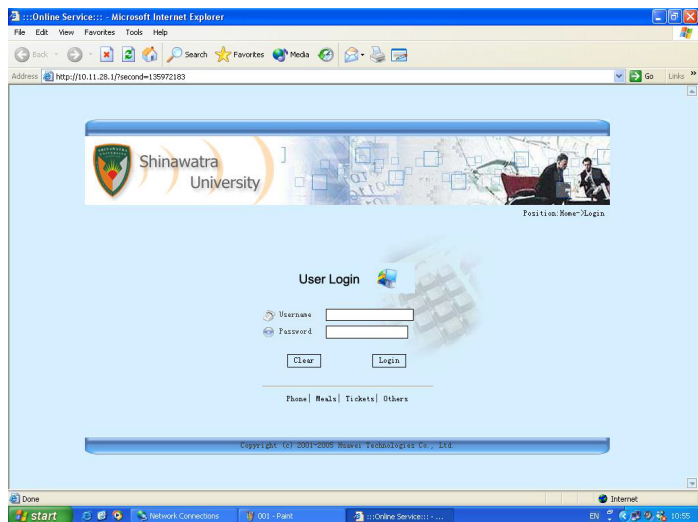

After configuring the network, you need to authenticate using your web browser. To access the internet, you will have to do the followings :

1. Open your web browser (e.g. Internet Explorer) and enter any website (e.g. www.hotmail.com).
2. You will automatically be redirected to Wireless Network Log In
3. You will be asked to enter Username and Password, which is the same as your SIU Webmail Account username and password

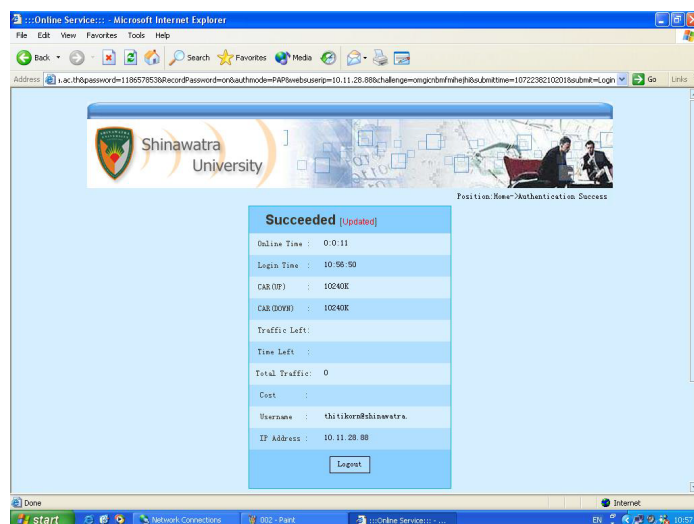

Example:

Username: **u45101003-1@padawan.shinawatra.ac.th**

Password: **xxxxxxxxx**

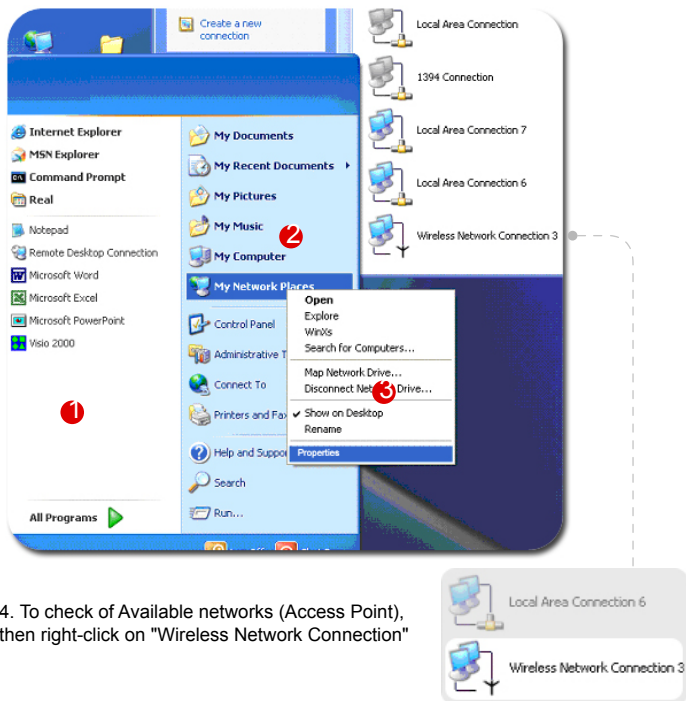

If successful, you will be directed to a confirmation screen

Note: Resize the confirmation window and do not close it; otherwise you will automatically log out

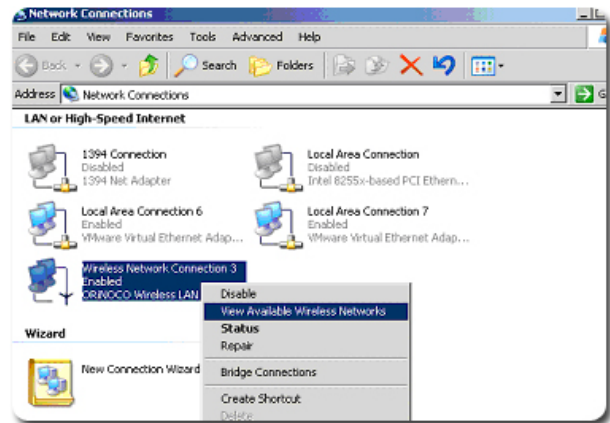

LIS Step by Step

1. Click on "Start"
2. Click on "My Network Places"
3. Click on "Properties"

4. To check of Available networks (Access Point), then right-click on "Wireless Network Connection 3"

5. Click on "View Available Wireless Networks"

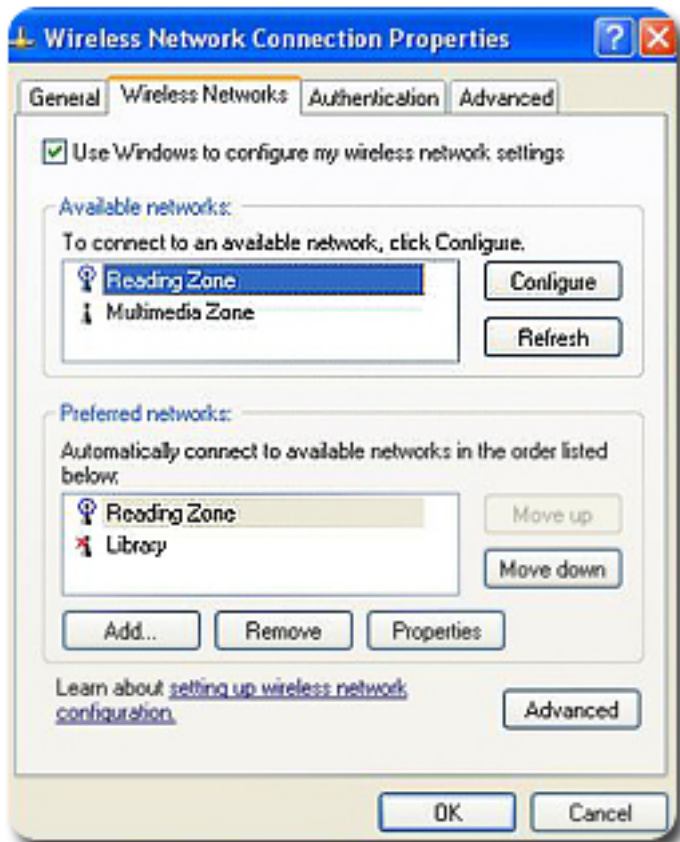

6. The "Connect to Wireless Network" window will show you what wireless networks are available in your location, in case of no networks available, click on the Advanced button to display the "Wireless Network Connection Properties" window.

1 2

7. The Properties windows (Wireless Network Connection 3 Properties) will open with the Wireless Networks tab

Note: Put a check in the check box next to: Use Windows to configure my wireless network settings

8. Click on Refresh and then click OK
9. Select any available networks (Access Point)
10. Click Connect

After configuring the network, you need to authenticate using your web browser. To access the internet, you will have to do the followings :

1. Open your web browser (e.g. Internet Explorer) and enter any website (e.g. www.hotmail.com).
2. You will automatically be redirected to Wireless Network Log In
3. You will be asked to enter Username and Password,

Example:

Username: u45101003-1@padawan.shinawatra.ac.th
Password: xxxxxxxx
